SUBJECT—INDEX PROCESSES

Core Drilling (in Civil Engineering)
Mobile cutting power for the construction industry, 1
Choosing the best grit for the job, 7
Double-head drill cores at a rapid pace, 13
Bridge demolished while traffic flows, 14
A quieter approach to upside-down drilling, 22
Probe drilling for tunnel excavation, 139
Business as usual during store reconstruction, 223
Diamond drilling at South Africa's first nuclear power station, 228
Providing drainage for an ancient Vatican wall, 297

Dressing & Truing
Getting the most from diamond dicing wheels, 80
A new dressing device for stone cutting saw blades, 284

Drilling
Choosing the best grit for the job, 7
Double-head drill cores at a rapid pace, 13
Bridge demolished while traffic flows, 14
Production of technical quartz glass parts, 90
Drilling and dicing thick film substrates, 97
Probe drilling for tunnel excavation, 139
Business as usual during store reconstruction, 223
Diamond drilling at South Africa's first nuclear power station, 228
Milling contours and profiles in stone, 264
Craelius launch the DIAMEC 260, 268
A new test machine for diamond drilling, 274
Synthetic versus natural diamond in hard rock drilling, 277
Providing drainage for an ancient Vatican wall, 297

Grinding
A new machine concept for wafer grinding, 85
Production of technical quartz glass parts, 90
The effect of grit size and carbide grade in plunge grinding, 145
Optimization of dry tool and cutter grinding using ABN360, 150
A new machine and wheel system for grinding sintered carbide tools, 155
Chatter vibrations and their suppression through wheel design, 161
Specialized versatility—an industrial service with a difference, 201
Grinding polycrystalline diamond tools, 212
Diamond turning and precision grinding on one machine, 230
Milling contours and profiles in stone, 264
New CBN range offers increased scope for tool optimisation, 300
The 'Industrial Robot' moves in on lens edging, 356
Precision grinding in small arms manufacture, 360

Inspection, Measuring Techniques, Quality Control
Surface damage studied by Soviet specialists, 89
Chatter vibrations and their suppression through wheel design, 161
Examining surgical implants, 171
A new test machine for diamond drilling, 274

Lapping & Polishing
Diamond Interface—key to faster, more economical superfine finishes, 16
Lapping and polishing by memory, 61
Surface damage studied by Soviet specialists, 89
A bold tooling investment brings 40% productivity increase, 130
Examining surgical implants, 171
Specialized versatility—an industrial service with a difference, 201
First international stone exhibition held in France, 261
Computer control in contact lens production, 331
Diamond for microsurgery, 347

Milling (of Stone)
Milling contours and profiles in stone, 264
Mechanized craftsmanship brings its own rewards, 269

Optical Machining, Lens Machining
Computer control in contact lens production, 331
The 'Industrial Robot' moves in on lens edging, 356

Polishing *see* **Lapping & Polishing**

Rock Drilling
Probe drilling for tunnel excavation, 139
Craelius launch the DIAMEC 260, 268
A new test machine for diamond drilling, 274
Synthetic versus natural diamond in hard rock drilling, 277

Sawing & Safety Grooving (of Concrete, etc)
Mobile cutting power for the construction industry, 1
Choosing the best grit for the job, 7
Bridge demolished while traffic flows, 14
Silos to hotel with diamond tools, 15
Smelter renovation completed without costly shut-down, 20
Renovating the Ambassador bridge, 25
Big blade helps relieve bridge stresses, 216
A new angle on bridge safety, 218
A diamond blade for dry sawing, 220
Trains keep running during bridge demolition, 222
Business as usual during store reconstruction, 223

Sawing (Materials other than Concrete)
Diamond Interface—key to faster and more economic superfine finishes, 16
Diamonds and electronics, 57
High precision slicing for solid state devices, 58
New developments in wafering technology, 64
Diamond band machining for electronic materials, 67
Calculating silicon slicing costs, 71
Micro-chip accuracy from the thinking dicer, 74
Diamond tooling for the electronics industry, 77
Getting the most from diamond dicing wheels, 80
Dicing semiconductor materials and glass, 82
Surface damage studied by Soviet specialists, 89
The world's largest blade for sawing granite, 93
Production of technical quartz glass parts, 96
Drilling and dicing thick film substrates, 97
Examining surgical implants, 171
The Bandit—a better way to cut laminated glass, 206
NORDIAX—the unique stone sawing concept for today, 253
Sawing granite blocks at a 45° angle, 258
First international stone exhibition held in France, 261
Milling contours and profiles in stone, 264
Mechanized craftsmanship brings its own rewards, 269
A new dressing device for stone cutting saw blades, 284
Frame saw blade tension—a new method for rapid measurement, 291
Diamond wire teams with robot, 336
Eight pence trims the Hatcher 'Night-Cap', 341
An efficient production system for GRP gutters, 344

Turning & Boring (also Fly-Cutting, Milling, of Metals, etc)
Finish-machining of bores in grey cast iron, 26
Reaming undersize holes in large steel plates, 96
A faster way to lose weight, 127
A bold tooling investment brings 40% productivity increase, 130
Machining cylinder bores at BMW, 135
Roll machining costs reduced, 140
Bore finishing with diamond cutting tools, 142
A better way to machine phenolics, 215
Diamond turning and precision grinding on one machine, 230
Machining wood and plastics with SYNDITE tools, 339
Economic machining of GRP laminates, 348
No putting the brakes on AMBORITE, 350
Turbine head offers new potential in micro-machining, 361

INDUSTRIAL DIAMOND ABSTRACTS

VOLUME 42 1982 1/82—6/82 Nos. 488 to 493

General Notes. (1) Individuals, societies, and institutions appear in the first part of the index, whilst commercial companies and trade names are listed in the second part. (2) Lists of new patents (section W) are not included. (3) Patentees from patent abstracts are indicated by an asterisk. (4) Abbreviated words *eg* St for Saint, Mc for Mac, appear in the alphabetical order of the full version. (5) Numbers given are abstract numbers: in order to locate in which issue a given abstract may be found, a key is appended on page 8. (6) Abstract numbers in brackets are of 'internal' references, *ie* they are not authors of the articles or patents but are referred to in the text.
